PROJECT REPORT

Starbucks Clone Website Using HTML & CSS

Student	Bhavya
Project	Project 1 – Clone Website
Technologies	HTML5 and CSS3
Project Type	Frontend Website Clone

1. Objective

The objective of this project was to create a clone-inspired website of an existing brand using only HTML and CSS. The project focuses on reproducing the overall structure, visual hierarchy, navigation, hero section, product cards, rewards section, footer, and responsive layout of a Starbucks-style website.

2. Project Requirements

Requirement	Implementation
Homepage design	Completed with hero, promotional content, favourites/products and rewards sections.
Navigation bar	Responsive navigation with brand name, menu links, store locator, sign-in and join buttons.
Hero section	Large coffee-focused hero area with heading, description, image and call-to-action.
Footer section	Multi-column footer with About Us, Careers, Social Impact and Contact sections.
Responsive layout	CSS media queries and flexible layouts used for different screen sizes.
HTML & CSS only	The clone website uses HTML for structure and CSS for styling and responsiveness.

3. Technologies Used

• **HTML5:** Used to create the semantic structure and content of the webpage.

• **CSS3:** Used for colors, typography, spacing, cards, buttons, layout, hover effects and responsive design.

• **Flexbox and Grid:** Used to arrange navigation elements, hero content and product cards.

• **Media Queries:** Used to adapt the layout for smaller screens.

4. Main Features

• Clean Starbucks-inspired navigation bar.

• Coffee-themed hero section with prominent call-to-action.

- Promotional section with image and supporting content.
- Our Favorites section with Caffe Latte, Cappuccino and Frappuccino cards.
- Starbucks Rewards section with supporting image and call-to-action.
- Structured multi-column footer.
- Hover and visual styling for interactive-looking buttons and cards.
- Responsive layout for different screen sizes.

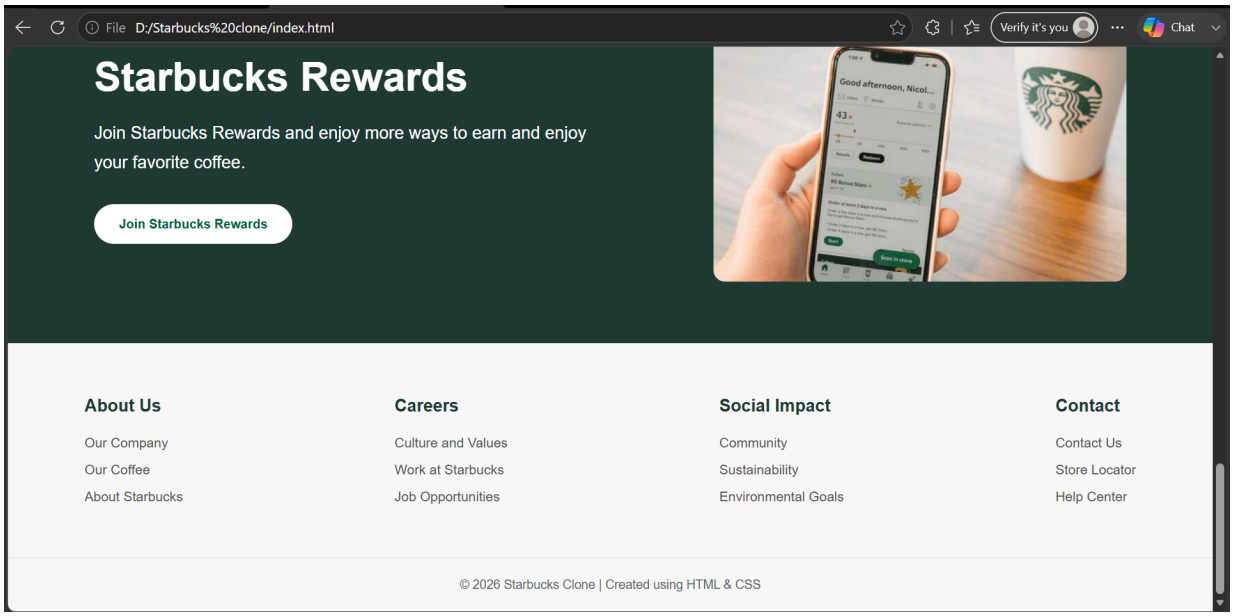

Figure 4: Starbucks Rewards and footer section

6. Implementation Summary

The website was developed as a single-page clone using a structured HTML document and an external CSS stylesheet. The navigation bar provides the primary site links and call-to-action buttons. The hero section establishes the visual focus with a large heading and coffee image. Additional sections present promotional content, featured drinks and rewards information. The footer organizes secondary information into clearly separated columns.

CSS was used to create the visual identity through a green-and-neutral color palette, typography, rounded cards, spacing, buttons and responsive layouts. Flexbox/Grid and media queries help the page adapt to different viewport sizes.

7. Project Structure

STARBUCKS CLONE/
■■■ index.html
■■■ style.css
■■■ images/
  ■■■ coffee and product images
  ■■■ rewards/promotional images

8. Learning Outcomes

• Understanding the structure of a real-world homepage.

• Creating navigation bars and hero sections using HTML and CSS.

• Using CSS Flexbox/Grid for page layout.

• Working with images, typography, spacing and buttons.

• Implementing responsive design using media queries.

• Organizing a frontend project into HTML, CSS and image assets.

9. Conclusion

The Starbucks clone successfully fulfills the specified Project 1 requirements. It demonstrates the use of HTML5 and CSS3 to build a complete, visually structured and responsive frontend website inspired by the Starbucks web experience.
